GS-1350N

Long Range UAV LiDAR Scanning System GS-1350N

Highly
Integrated

High
Precision

1500m
Ranging

High
Efficiency

Multi
Platforms

Easy
Operation

GS-1350N LiDAR scanning system is a UAV / vehicle measurement system independently developed by Geosun company. It highly integrates laser scanner, GNSS satellite positioning system, INS inertial navigation system and camera(optional), and can quickly obtain high-precision laser point cloud number. It can be widely used in Digital city construction, Industry, Land survey, Forestry and Agriculture

System Parameter

Accuracy	≤10cm@300m	Dimension	245*140.5*125mm
Weight	< 3.2kg	Storage	512 GB Solid State Drive Support 128GB TF Card
Working Temperature	-20° ~ +55°	Carrying Platform	Multi Rotor/VTOL/Vehicle

Laser Unit

Measuring Range	1500m@50%	FOV	75~90°
Laser Class	1550nm	Range Accuracy	±0.5cm
Laser type	Single line mechanical scanning	Echo	Seven Echo

POS Unit

Update Frequency	200HZ	Position Accuracy	≤0.05m
Pitch /Roll Accuracy	0.003°	GNSS Signal Type	GPS L1/L2/L5, GLONASS L1/L2 BDS B1/B2/B3, GAL E1/E5a/E5b
Heading Accuracy	0.010°		

Pre-Processing Software

POS (Trajectory) Software	Shuttle	Point Cloud Software	gAirHawk
---------------------------	---------	----------------------	----------

Camera

FOV	80°
Effective Pixel	24 MP
Focal Length (mm)	16

Operation Efficiency Table

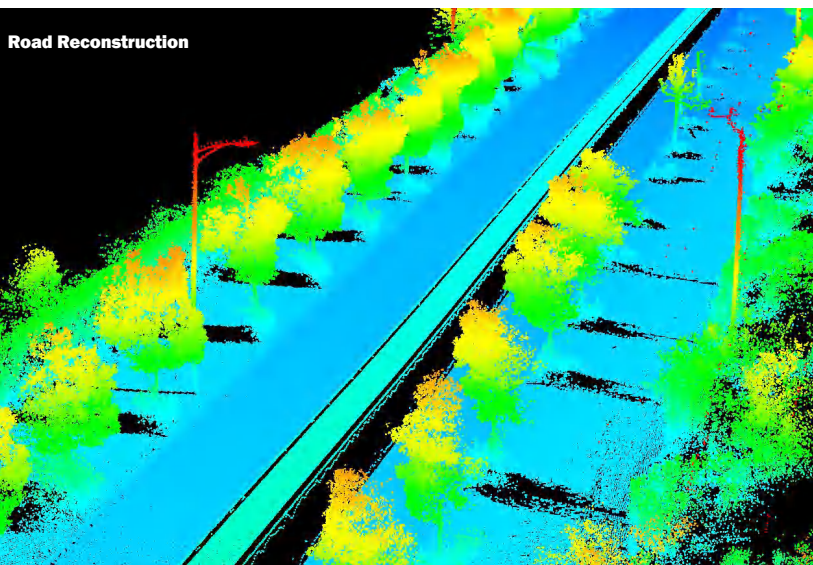

Flight Height (m)	Density(pts/m ²)@10m/s	Single Flight Operation(km ²)
200	135	2.8
400	40	5.6
600	10	8.4

Mission Planning Software (optional)

Mission Planning Software

Customized Route Planning Software – WayPoint Master

Application Case

Model:GS-1350N

Carrying Platform:Vehicle

speed:40 km/h

Application: Road Reconstruction

Project location:China
